Let PCM increase your service availability and eliminate up-front capital costs with IBM i Cloud Services.

PCM's IBM i Cloud services provide all the benefits you expect in a Cloud solution plus PCM's expertise in hosting and managing IBM i systems.

Our foundation is built on IBM Power Systems hardware allowing fast provisioning of cloud based partitions and flexibility in adjusting resources to meet the dynamic needs of today's business.

PCM takes the responsibilities of maintaining infrastructure, and providing connectivity to free your IT resources for a more strategic focus. Constant system monitoring from PCM's tools and experienced support team layers on top of PCM's secure and reliable hosting data centers to give you the confidence that your system will be accessible when needed.

Hybrid Cloud Data Centers

- Tier 3 Data Centers**
 PCM provides the ideal environment for cloud hosting services. Our GEO diverse facilities are designed to rigorous specifications; power, cooling and other critical components are highly-redundant to ensure constant operation, along with state-of-the-art facility design and safety features.
- Multi-level Security**
 Each data center incorporates 24x7 on-site security and protocols to protect your hosted systems and data. PCM provides a layered approach to security that limits access by internal staff, visitors and other customers.

- Compliant & Audited**

PCM's hosting facilities are SSAE16 SOC1 Type 2 Certified and PCI-DSS compliant. We are audited annually by a fully independent organization to ensure compliance with critical standards that support your business' legal and regulatory needs.

Service Options

- Server Monitoring and Management:**
 Whether the system is on-premise, in the cloud, or a hybrid model, PCM can monitor and manage your systems.
- Advanced Backup Services:**
 PCM provides a complete backup solution for hosted customers including offsite storage for long term archiving needs.
- High Availability Services:**
 PCM offers High Availability solutions to help you provide near-continuous availability of information from your IBM i system through planned testing and unplanned recovery events.
