

SOPHOS

Security made simple.

Sophos Mobile Control

Device Management, Application Management,
Email Management and Security

Give your users the latest mobile technology while keeping your organization's data safe. We help you secure, monitor and control mobile devices with over-the-air control. The self-service portal makes mobile management easy and stops Bring Your Own Device (BYOD) from becoming an IT nightmare. Choose the delivery model to suit your needs.

Key benefits

- › A single solution for iPhone, iPad, Android, Windows Phone 8 and more
- › Gives you a simple role-based web console
- › Enroll devices and pushes out policies and apps over the air
- › Intelligently assign devices to Active Directory groups and apply policies
- › Regularly checks if devices are compliant with corporate rules. Controls access to corporate resources such as email or VPN, and warns admins and users of non-compliance
- › Lets you remotely locate, lock and wipe devices to prevent data loss and ensure compliance
- › Securely wipe all corporate data if an employee leaves the company
- › Allows users to register and manage their devices through a simple web-based self-service portal
- › Push apps to mobile devices or offer them in an Enterprise App Store
- › Control e-mail flow and network access based on device compliance
- › Offered for on-premise installation or as a Sophos-hosted Software as a Service (SaaS)
- › Optionally integrate our Mobile Security app to protect your Android devices from malware and other threats

Keep your data safe and in compliance with regulations

With Sophos Mobile Control, we let your users work flexibly while on the move—no matter which mobile device they have.

Secure mobile devices Protects your confidential data by letting you configure mobile devices in a consistent and safe way, including password policies and screen locking.

Wipe lost or stolen devices Let admins or users remotely lock devices and wipe data in seconds if a mobile device is lost or stolen, or if an employee leaves the company.

Securely access email Manage access to your organization's email using a secure proxy to Exchange ActiveSync. We regularly check to make sure only compliant devices have email server access.

Stay in control of your mobile devices Mobile Control checks the phone state against a set of company rules like jailbreak detection, password configuration or blacklisted apps. If a device is not compliant, the administrator can be notified, a new configuration applied or access to company email automatically blocked.

Make your Samsung devices SAFE™ for work Designated for business, Samsung Approved For Enterprise (SAFE) devices allow configuration directly in your Sophos Mobile Control console. Set up restrictions, Wi-Fi, passcode policies and more. Secure your Samsung devices for work.

Inventory management Get an overview of all mobile devices in your company and check their status. See the device model, OS version and many other properties of the device. You can choose the format you prefer: a list or a comprehensive graphic report.

Extra protection for your Android devices Sophos Mobile Security—Enterprise is available as an add-on for Mobile Control. Our app shields your Android devices from malware and offers protection against malicious websites. And it's all fully managed from your Mobile Control console.

What's New in Sophos Mobile Control 3.5:

Windows Phone 8 support

- › Self Enrollment Capabilities
- › Ability to wipe, locate and decommission the phone if it was configured through Sophos Mobile Control
- › Includes an easy to use Windows Phone 8 App in which includes information on compliance status, apps, messages, and support information.

Comprehensive Reporting

- › Comprehensive reporting on how many devices a user has, how many devices for a particular OS, if new devices have been added, in addition to App and Compliance reporting.

Simple Administration

- › New Menu, Dashboard, and Workflow improvements enable information to be accessed with a click away.
- › The first time users login to the console, they get a comprehensive view into device management and compliance status.

SaaS Improvements

- › Remote EAS Proxy (SaaS) enables an organization to block a non-compliant device from receiving email
- › Remote LDAP (SaaS) allows users to connect to an active directory, offering better integration into the organization.

Works with the latest and most popular mobile platforms

Say yes to BYOD when users want to use their own smartphones and tablets. You're safe in the knowledge that you can keep them secure.

Enable security features on your devices Only users that are compliant can access your organization's email servers.

Approve user apps An Enterprise App Store for iPhone, iPad, Android and Windows Mobile lets you define the apps users can or should have installed on their mobile. It works with publicly available apps or apps that you've created in-house. We also support iOS managed apps which you can selectively wipe from a device.

Convenient setup Get over-the-air setup and configuration, giving you control of devices from anywhere, at any time.

Mobile security that saves you time

We make things much simpler for your IT staff while providing the best possible mobile experience for your users.

Single-console management IT administrators can manage all supported smartphones and tablets from one web-based console. Manage your devices regardless of operating system, service provider, network or location of the device.

Know you're compliant Our simple web console has a dashboard view to quickly show registered devices and whether they're compliant with policies. We also include auditing so you easily track changes.

Self-service portal Let your users handle routine tasks themselves with a self-service portal that helps them activate a new device. And, if they ever lose it, they can lock or wipe their mobile.

Find lost phones Android and iOS users can also find their phones or tablets using its GPS or 3G signal.

Control apps being installed Manage apps on your devices and deploy pre-configured apps over the air. You can also uninstall applications, schedule backups* and restore devices in exactly the same way.

Mobile inventory Get an at-a-glance mobile inventory that records all registered devices, as well as device configuration settings, serial numbers, model and hardware details.

Graphical reports Allows you to clearly see the status of your mobile devices. The graphics include compliance, ownership, OS type and version.

Supports multi-tenancy Giving you the flexibility you need to manage multiple independent sites or customers from a single Mobile Control server.

Two delivery models With the SaaS offering you don't need to install or maintain anything on your premises. Just use a browser to access the web console. Our SaaS is ideal to get you up and running in no time.

And now you have more options to integrate the SaaS version into your IT with the optional remote EAS proxy and remote LDAP connection for Active Directory.

System requirements
