We can help you redeploy or dispose of your equipment

Imagine that your company is about to embark on a large desktop refresh project. As you work through the details of procuring the equipment and scheduling the deployment, you start to think about what you're going to do with all the existing equipment. Can some of the equipment be redeployed? Can it be sold? How and where will you dispose of the non-usable equipment? Are there federal, state, and local laws concerning the disposal of electrical equipment? What can be recycled? How can you ensure that sensitive data is completely erased and destroyed?

These and other questions demonstrate that equipment disposal is not something that can be done as an afterthought anymore. As part of our lifecycle services, we can manage all aspects of retiring your old IT equipment so that you are free to focus on activities more essential to your business. Our team will work with you to determine the practices and policies for redeployment, reselling, data destruction, recycling, and disposal.

Let us help you plan, deploy, manage, and refresh all of your IT equipment no matter what mix of computers, servers, and devices you require.

Asset Disposal & Remarketing

Many IT assets have residual market value, so we can work with you to maximize any remaining value. And, for any equipment that is obsolete or beyond repair, we'll work with you to dispose of it within all current environmental laws and regulations.

- Physical audit and market value assessment
- Audit reporting including make, model, and serial numbers for MLA reporting
- Hard drives will be erased and overwritten
- Inspection and preparation of equipment that is set to be redeployed
- Auctioning equipment to the highest bidder
- EPA-compliant recycling and disposal services
- Transfer of title will be provided

Data Wiping & Destruction

Old technology destined for lease return, remarketing, or recycling still can contain highly sensitive information, such as credit card numbers, employee information, customer records, and financial data. We'll work with you to meet your unique requirements and protect your organization from the risks and liabilities associated with IT disposal.

- Standard DoD wipe, including random 1/0 patterns on drives intended for re-use
- Full data destruction via hard drive shredding
- On-site and off-site options available to meet your security and budgetary needs
- Deeper audits, including make, model, serial, and configuration for re-marketing
- Certificates of destruction

Logistics

Our nationwide coverage allows us to handle your IT asset management needs for locations across the entire country. We'll work with you to get your materials delivered faster and more cost-effectively than handling it on your own.

- Packing and picking up of all equipment
- Managing the schedule for the pickup and disposal of equipment
- Providing a physical audit of all items received

Be Prepared for Your Next Challenge

Electronic equipment disposal can be a costly, time-consuming activity as well as pose legal and security risks for any company. The good news is that we have the knowledge and experience to help. Contact your dedicated Account Executive to learn how we can provide a customized, cost-effective solution for your specific needs.
