Business continuity services for IBM System i

Whether your business requires complex, fully-managed hosting or high availability disaster recovery services, we excel at delivering and supporting IBM System i computer systems, formerly known as IBM iSeries, and AS/400.

In addition to managed services, we can prepare for the unexpected by ensuring that you have a back-up plan and systems in place to ensure operational continuity. We provide peace of mind with dependable services for productivity before, during and after the event.

Business Continuity Services

Business Continuity is mission-critical for most businesses, yet implementing a robust, properly secured, in-house disaster recovery solution can be prohibitively expensive. For iSeries customers, we deliver affordable, flexible business continuity services backed by market-leading expertise in the iSeries environment.

We provide two standard offerings of i5 Business Continuity services to meet the specific needs and budget of your enterprise. Plus, all systems are hosted at our SSAE 16 accredited data center facilities.

Virtual Recovery On-Demand Services

When your recovery requirements can be accomplished in hours and days, Virtual Recovery Services offer lower costs with shared resources that are pre-positioned to expand for annual DR testing and declared recovery needs.

High Availability Services

If your recovery requirements are immediate, hosted High Availability Services allow you to avoid up-front capital costs that could break the bank. This solution includes monthly service with end-to-end resources, including hardware, software and services.

Advanced Backup Services

Our Advanced Backup Services provide a complete back-up solution based on business-level requirements with defined operational procedures and the supporting hardware and software infrastructure.

Our experienced professionals manage all aspects of your backup needs to ensure that your most critical enterprise assets are fully protected at all times.

We'll develop and implement a dependable plan for the backup and recovery of your critical systems before disaster strikes.

SSAE 16 Data Centers

Designed and built to help protect against security breaches and natural disasters, our hardened data center facilities adhere to strict operational standards and offer a security-rich, controlled environment equipped with extensive high-availability design features.

- ▶ SSAE 16 certification
- ▶ N+1 power systems and infrastructure
- ▶ Physical security with gated campuses, card access and video surveillance

Our consultants, architects, and engineers understand the intricacies of business continuity and disaster recovery, and we know how these solutions can benefit your organization. Call your Account Executive today to learn more about getting started with a business continuity solution.
