Comprehensive managed data center services

Our hardened data center facilities are designed and built to protect against security breaches and natural disaster. We work with you to create security-rich, controlled environments equipped with extensive high availability design features. We always develop our hosting solutions to adhere to strict standards, like the Statement of Standards for Attestation Engagements (SSAE) No. 16.

SSAE 16 was finalized by the Auditing Standards Board of the American Institute of Certified Public Accountants (AICPA) for control and reporting on service organizations. We take pride in providing data denter operations that are fully SSAE 16 compliant

The following is an overview of our data center facilities:
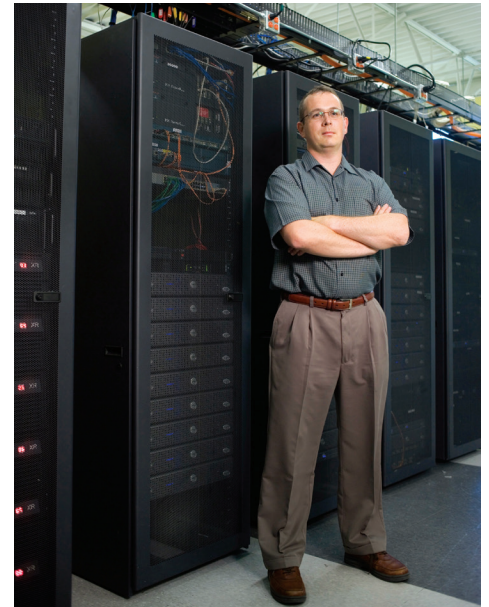

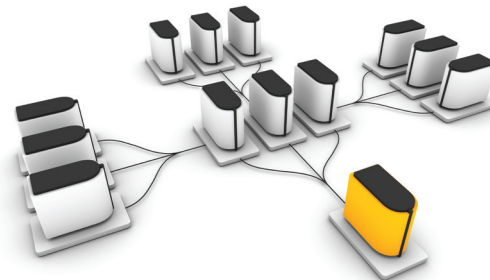

Power System and Environmentals

◗ Multiple N+1 uninterruptible power supply systems (UPS)
◗ N+1 standby generator facilities
◗ N+1 chilled water plants
◗ APC InfraStruXure InRow cooling with N+1
◗ Power and cooling capacity for high density server environments
◗ 24/7/365 proactive environmental monitoring systems

Service Provider Communications Infrastructure

◗ Multiple provider Internet infrastructures
◗ Shared Internet communications with burstable bandwidth
◗ Sonet, T1, DS3 and Metro Ethernet access available for private networks
◗ Redundant Cisco based internal networking components
◗ Redundant Cisco firewalls and intrusion prevention systems
◗ Cisco Security Monitoring, Analysis and Response System (MARS)

Fire Detection and Suppression

◗ FM200 waterless fire suppression system
◗ Multiple zone fire and smoke detection sensors

We're experts at developing and deploying secure, dependable IT systems, backed by superior support and services.

Physical Security Features

◗ Gated access to campus facilities
◗ Card access to buildings and data centers
◗ Monitored and archived video surveillance of perimeter and interior
◗ Hybrid polymer-coated roofing to protect against wind speeds up-to 180 mph
◗ Co-location suites with dedicated cage space

Server Platforms Supported

◗ Multi-Manufacturer intel Servers + VMware Server Farm
◗ IBM System i (AS/400) + Shared System i Server Resources
◗ Blade servers from IBM, HP and Dell
◗ SAN storage from EMC, EqualLogic and more
◗ Microsoft Windows Server 2003 and Windows 2008
◗ Red Hat Linux® and SUSE Linux
◗ VMware ESX Server
◗ Citrix MetaFrame Server
◗ IBM OS/400

With managed data center services, our technical specialists can manage, monitor, and support your entire IT environment. Contact your Account Executive to learn more.
