chrome

Give your organization a complete out-of-the-box solution for Google Chrome OS devices Eligible Products

Any single system with Chrome OS preinstalled and supported by the hardware manufacturer.

The PCMG Chrome Configuration Service will have your users up and running the moment their Chromebook or Chrome OS device arrives.

Why would my organization use this service?

- Users can be up and running out-of-the-box
- Save time and money by shipping devices directly to your final destination. Eliminate the need to ship Chrome OS devices to your organization's central IT office, unbox, configure, repackage and then ship them to your final destination.
- Keep your projects on schedule by virtually eliminating Out-of-Box Failure, Dead-on-Arrival deliveries and
- merchandise replacements
- Free your IT staff to focus on core IT business objectives

What is included in the PCMG Chrome Configuration Service for Google Chrome OS?

- Update the Chrome OS to the latest version
- Enroll the Chrome OS device into your organization's Google Apps domain using an enrollment account you create which does not require admin privileges
- Perform wireless network configuration for your organization's network using WPA or WPA2 with pre-shared key authentication

What other Configuration Service options are available for Chrome OS devices?

- Mobile Wireless Activation (for models with preinstalled mobile wireless cards)
- Asset tags (customer or custom asset tags)
- Data capture of data fields other than serial number and asset tag
- Kitting
- Asset Tagging and Etching Services available upon request

Service Scope

1) The system required for configuration will be unboxed.

2) The system will be thoroughly inspected for physical damage or blemishes.

3) The system will be powered on and inspected for hardware and/or software errors.

4) The system will be replaced from PCMG's inventory if device is determined defective.

5) The system will be updated to the latest/approved Chrome OS release by performing full update to latest stable channel release version at time of configuration.

6) The system will be enrolled to the customer's domain by performing Enterprise enrollment and validation.

7) The system will have network configuration settings applied by performing Wireless configuration (Wi-Fi SSID and Pre-Shared Key).

8) The successfully configured system is re-boxed for shipment.
